MEDFUSER® DUO NRFit Key Elements

Elastomeric (silicone) balloon providing stable infusion pressure and proven drug stability.

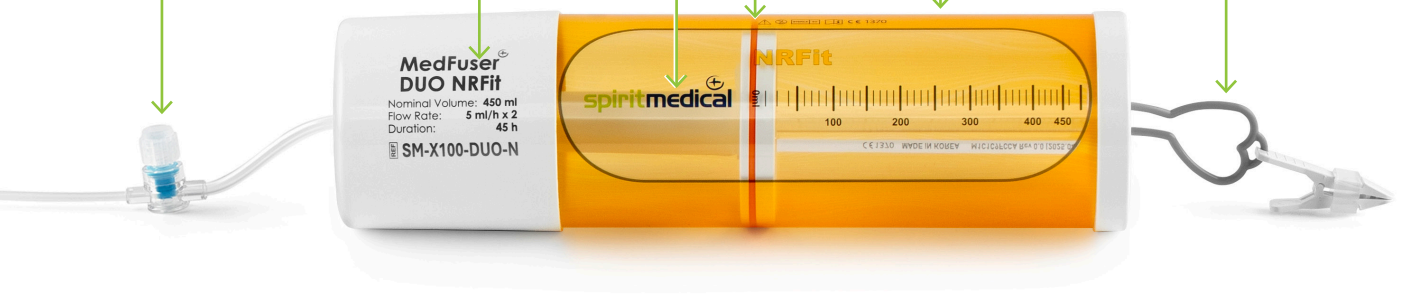
Accurate fluid level indicator provides peace of mind for clinicians and patients.

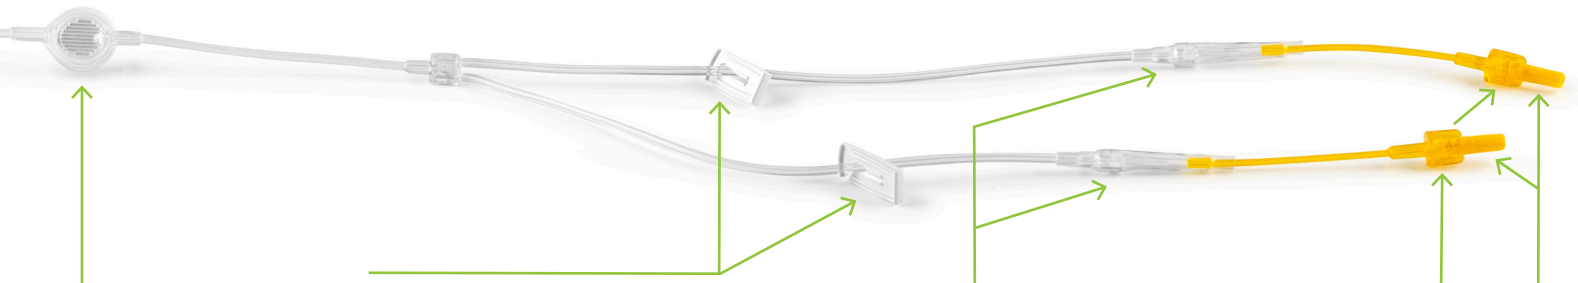
Prominent product information to help identify the appropriate pump for safe patient treatment.

Robust, UV light shielding protective case.

Integrated hanger and clip.

Luer-lock filling port inlet with cap.





Removable slide clamps give clinician control on starting and stopping infusions.

Yellow colour connectors and hydrophobic caps identify NRFit® connectors, compatible only with regional anaesthesia devices.

Flow regulator capillaries with unique design accurately control the medication flow.

Distal-end protective caps automatically help to prime the patient line without spills.

Integrated air filter and 1.2 micron particle filter automatically removes air and impurities from the patient line.
